Expedier Hiring Team
Hamilton, Ontario, Canada

Dear Expedier Hiring Team,

Re: Application for Senior Software Engineer

I am applying for the Senior Software Engineer role. I am a Python backend developer with about four years of production experience — most recently maintaining a payments and billing backend that grew to 325,000 customer accounts — and the stack this role is built on (Python, PostgreSQL, React, AWS/GCP, and GitHub Actions) is exactly the environment where I do my best work.

Payments and billing under load. At Benin Electrics (BEDC), I owned the backend behind a customer-facing payments application serving 325,000 accounts across the franchise. That meant designing and maintaining APIs and database layers for billing, account management, and high-volume transactions — the same class of financial-integrity problems Expedier's money app handles every day.

A security-first mindset for a platform moving real money. I manually test every endpoint I ship before it reaches production, probing authentication, authorization, and input handling with Burp Suite, OWASP ZAP, and SQLMap. That habit is why I found and fixed a session-cookie security flaw (CWE-614) in Tracecat, a 3.8k-star security-automation platform, with regression tests that a maintainer reviewed and merged. Secure money movement is not optional; it is the core of how I write software.

Your stack, ready from day one. Python backend services, PostgreSQL with clean migrations (Alembic), Redis for caching and async workflows, Docker for consistent deployments, and GitHub Actions enforcing CI/CD on every pull request. On the frontend I ship React 19 and TypeScript, so I am comfortable with the full-stack scope of this role, and I have integrated LLM pipelines into production applications — directly relevant as Expedier automates more of its platform.

I work from Nigeria with strong overlap with Canadian business hours, and I am genuinely motivated by the cross-border story Expedier is building between Nigeria and Canada. I would welcome the chance to help you scale it securely.

Sincerely,

John Ezekiel
